### How to make Comments and Contents

### How to Make Comments

This document has been prepared for consultation and community involvement. Comments can be made in any of the following ways:

By post: Planning Policy Section Chorley Borough Council Council Offices Union Street Chorley PR7 1AL

By fax:01257 515478By e-mail:planning.policy@chorley.gov.ukOn-line:www.chorley.gov.uk/planning

For comments to be considered they must be received by the Planning Policy Team by no later than 5pm \*\*\* \*\*\* 2007. Respondents are asked to use the representations form a copy of which is appended to the back of this document.

Representations will be analysed by the local authority and the main issues arising will be sent to the Secretary of State along with copies of the representations made. It may be possible for minor amendments to wording to be made during the subsequent Examination stage. However, no substantive change will be possible.

### **1. About this document**

- 1. This document aims through the control of the grant of planning permissions to enable the inclusion of sustainable methods of construction within residential, commercial and other developments that will reduce carbon emissions; manage water supplies; source construction materials: encourage the recycling of waste and promote renewable energy capture. The document also covers stand-alone renewable energy capture schemes.
- 2. This is the first policy document within Chorley's new Local Development Framework (the new style local development plan). It relates to one specific topic and will, as other Development Plan Documents are produced, result in a folder of planning policies relating to spatial development in the Borough. The document and the evidence based used to prepare it will influence the forthcoming Core Strategy the Local Development of The implementation of Framework. the document is also supported by a Sustainable Supplementary Resources Planning Document. This was issued in draft form in March 2006 and will be finalised following the adoption of this Development Plan Document.
- 3. The specific policies set out in this Submission stage document can be traced back to initial consultation work on the Issues and Options facing Chorley Borough. This took place in the autumn of 2004. The main findings were:
  - 80% of respondents supported the encouragement of "small scale renewable energy schemes on new and existing developments".
  - 75% of those who expressed an opinion supported the production of policies, "which are positive about renewable energy schemes (including preferred

locations) but which also provide protection from negative impacts upon the local environment, landscape and homes".

- In relation to recycling, 78% of those who expressed a positive opinion supported the requirement for "employment and housing developments to make provision for the storage of wheelie bins and other recycling bins/containers".
- 75% of those who expressed an opinion supported the production of policies, "which are positive about renewable energy schemes (including preferred locations) but which also provide protection from negative impacts upon the local environment, landscape and homes."
- 4. Building on the results of this work a Preferred Options document has been consulted upon. The most recent Preferred Options consultation started in March 2007. This consultation set out a number of options and made clear that it was possible to bring forward options that had not previously been considered the Council. Previous by consultation took place on the Preferred Options Development Plan (March 2006 and June 2006). The representations made at the Preferred Options stage generally supported the proposed policy options to:
  - Include a requirement for renewable energy to be generated on site as part of a planning permission.
  - Ensure developments are designed in an energy efficient and sustainable way to include materials, design, climate proofing and waste management.
  - Set out a criteria based policy on standalone renewable energy generation schemes.

### **1.** About this document

This Submission stage Development Plan 5. Document takes into account the representations that were made relating to the Preferred Options Document, as well as changes to the national and regional policy context. It sets out detailed spatial planning policies that reflect the local distinctiveness of Chorley Borough and proposes how the policies can be implemented and monitored. These will help the Council to meet its responsibility to reduce the effects of climate change and lessen other adverse impacts on the environment.

> Sustainability Appraisal involves considering the social, economic and environmental impacts of the policies in this document.

6. Sustainability Appraisal work has tested and informed the options from which the detailed policies are derived. Appendix 1 provides more details. The separate Sustainability Appraisal Report goes into considerable detail and it can be concluded that the two policies proposed will have a positive impact for Chorley. Following a Screening Report process it is not considered necessary to undertake an Appropriate Assessment under the Habitats Regulations Assessment.

> Habitats Regulation Assessment requires a determination of whether a proposed plan in combination with other plans and projects is likely to have a significant effect on sites designated for the protection of habitats and species of European importance. If significant effects are likely Appropriate Assessment is required to determine whether the plan would adversely affect the integrity of the sites.

- This submission stage Development Plan Document was approved for consultation at the Council meeting on 18 September 2007. Representations can be made to this document during the six week period X October Y- November 2007.
- 8. Following this period of consultation the representations will be forwarded to the Secretary of State who will appoint an independent Planning Inspector to examine the Soundness of the Development Plan Document and set out recommendations that will be binding on the Council.

The term "Soundness" relates to nine tests set out in Appendix 2. These relate to the three broad headings of Procedural; Conformity; Coherence, Consistency and Effectiveness. It may be that all of those who have made comments are content to submit written representations. In such a circumstance there would be no public sitting of the Examination.

- 9. The envisaged timetable for the remaining preparation process is set out below:
  - Submission to Secretary of State October 2007.
  - Pre-examination meeting February 2008.
  - Public Examination April 2008.
  - Adoption November 2008.

### 2. Background

- 10. This Development Plan Document sets out what policies the Council intends to use when considering planning applications to ensure that the impacts of new development on climate change, and on the environment generally, are as benign as possible. It relates to energy efficiency, the reduction in carbon emissions, construction that is adaptable to climate change, as well as the promotion of renewable energy generation and the wider issue of waste reduction. It will also act as a promotional document to encourage all partners with an interest in the Chorley area to work towards the objective of sustainable development. It has been prepared in close co-operation with a number of stakeholders, in particular United Utilities, the Environment Agency and Natural England.
- 11. It takes into account the objectives of relevant national. regional and local strategies as well as the distinctive characteristics of Chorley Borough. It also the 2005 draws heavily on report Opportunities for Renewable Energy in Chorley'. This detailed evidence demonstrates that there is very significant potential to capture renewable sources of energy in the Borough.
- 12. So as to keep this policy document short detailed supporting background information is contained in separate documents<sup>1</sup>.
- 13. Given the fast evolving nature of relevant technologies and related legislation a detailed (draft) Supplementary Planning Document on Sustainable Resources<sup>2</sup>

provides useful background information and technical advice, including useful contacts.

- 14. This Development Plan Document has been prepared in advance of the Core Strategy of the Local Development Framework. This is because Chorley is very well placed to be a leading authority in sustainable resources in the North West and, given the compelling imperative of climate change, as well as the requirements of the Borough Community Strategy, the sooner such principles and policies are implemented the better.
- 15. Transport is a major user of fossil fuels and contributor to global warming. Issues concerning the location of developments, and accessibility by different types of transport will be considered in policies to be contained in the forthcoming Core Strategy.

Technical Supporting Documents are available either from the Council's Offices or on the Council's web site.
 To be finalised and adopted once the Council has receipt of the Inspector's recommendations following the Examination of this Development Plan Document.

### **3. National Context**

- 16. The purpose of the Climate Change and Sustainable Energy Act 2006 is to, "enhance the United Kingdom's contribution to combating change." Local authorities such as Chorley Council are required to:
  - Improve efficiency in the use of energy.
  - Increase the amount of electricity or heat through micro generation or other low emission technology or source.
  - Reduce the emissions of greenhouse gases.
  - Reduce the numbers of households living in fuel poverty.

Greenhouse gases are those in the atmosphere which prevent the sun's heat reflected from the earth's surface from escaping into outer space and so contribute to global warming. The most common greenhouse gas is carbon dioxide.

A household is said to be in fuel poverty if it needs to spend more than 10% of its income on fuel to adequately heat their home.

- 17. Policies in this document directly relate to these requirements.
- 18. The Government's objective is to cut the United Kingdom's carbon emissions by 60% by 2050 with real interim progress towards this by 2020. Planning Policy Statement (PPS) 22 - 'Renewable Energy' sets out how the planning system will contribute to this. More specifically PPS22 states that, "the wider environmental and economic benefits of all proposals for renewable energy projects, whatever their scale, are material considerations that should be given significant weight in determining whether

projects should be granted planning permission."

- 19. The now former, Chancellor referred to all new homes being "zero carbon" by 2016 in his pre-Budget Statement in December 2006. This requirement has been reiterated in the recent Housing Green Paper. The draft Planning Policy Statement: 'Planning and Climate Change' (a supplement to PPS1) was released for consultation in December 2006. This made clear that spatial planning has an important role in combating global warming and that this role is central to both producing development plan documents and to assessing planning applications. Due to the importance of climate change the draft PPS supplement states that all substantial developments should include renewable energy capture so as to reduce carbon emissions by at least 10% irrespective of whether there is an adopted planning policy seeking to do this.
- 20. The Stern Review: 'The Economics of Climate Change' (2006) has set out the important role that planning has in combating climate change and that, "the costs of stabilising the climate are significant but manageable and that delay would be dangerous and much more costly".
- 21. Building Regulations that set minimum construction standards. have become increasingly strict and will continue to be more challenging particularly in the use of energy. The Code for Sustainable Homes published in December 2006, sets out a standard, easily recognisable rating for sustainable homes. All publicly funded houses will be required to reach Level 3 of the Code which is significantly more stringent than the current Building Regulations.

### **3. National Context**

The Code for Sustainable Homes is a progressive six stage set of construction and other development requirements. More details are available on www.communities.gov.uk. The Code is a development of the Building Research Establishment BREEAM ratings for 'EcoHomes' - more details are available on www.breeam.org.uk

22. The consultation document 'Building а Greener Future: Towards Zero Carbon Development' has as its objective that by 2016 new homes will produce no carbon emissions. That is rated as Code 6 of the Code for Sustainable Homes. This rating does not just relate to the energy efficiency of a building but also to the wider sustainability of the development. It suggests that by 2008 it would be mandatory for all new homes to have a Code rating. It also sets out a draft timetable as to when each higher Code level is likely to be reflected in the Building

Regulations. The Sustainable Code is similar to the BREEAM ratings for the non-domestic sector. The policies in this Development Plan Document directly relate to these measures.

- 23. Also in December 2006, a consultation document on 'Water Efficiency in New Buildings' was published. This stresses the importance of reducing water usage and considers that the best way forward is through amendments to the Building Regulations.
- 24. All new developments now require an Energy Performance Certificate. This also relates to the sale of older properties except for some smaller homes, which are likely to be included in the future.
- 25. This Development Plan Document is the local response to implementing these national objectives and ensuring that Chorley businesses and residents alike are able to benefit from good forward thinking design and best practice.

### 4. Strategic Context

- 26. Once adopted this Sustainable Resources Development Plan Document, together with saved policies from the Chorley Borough Local Plan Review, and other forthcoming Development Plan Documents within the Development Framework, the Local Spatial Regional Strategy and the Lancashire Minerals and Waste Local Plan will make up the Development Plan. Advice set out in Planning Policy Statements is not replicated in this document as under the new planning system it is considered unnecessary to duplicate published national planning policies. 7
- 27. The current Regional Spatial Strategy is the Regional Planning Guidance for the North West adopted in March 2003. This will be replaced by a new Regional Spatial Strategy which is intended to be adopted in 2008. Until this Strategy is adopted the Joint Lancashire Structure Plan adopted in March 2005 remains part of the Development Plan. Work is taking place on replacing the Lancashire Minerals and Waste Local Plan but until the new Joint Lancashire Minerals and Waste Development Framework is adopted, this will continue to be the relevant planning document relating to waste issues.

### **4. Strategic Context**

In the interests of brevity Appendix 3 separately refers to the relevant strategic policies. The Waste Minimisation Supplementary Planning Document is very relevant to this policy document and can be viewed at http://www.lancashire.gov.uk/ environment/lmwlp/index.asp.

- 28. These strategic documents and the national policy statements provide pointers to the detailed policy specific to Chorley that should be contained within the Local Development Framework, under the umbrella term of 'Sustainable Resources'. They fully support the spatial objectives set out below including the objective of setting site-specific targets for renewable energy generation.
- 29. In July 2006 the North West Regional Assembly published 'Advancing Sustainable Energy - A Sustainable Energy Strategy For the North West'. This makes clear that all energy users of the North West have a responsibility to cut their carbon emissions.
- 30. The Lancashire Economic Partnership's Lancashire Environmental Strategy includes Energy and Environmental Technology as one of its Regional Priorities in the development of the Knowledge Economy. Therefore the development of a strong local demand for renewable technology, energy saving installations, design and practical construction/manufacturing skills, will directly contribute to this regional priority.

How the Objectives of the Community Strategies relate to the Sustainable Resources Development Plan Document.

31. Ambition Lancashire 2005-2025 is the

Community Strategy for Lancashire. It sets out a number of actions amongst which the following have a direct link to policies SR1 and SR2 of the Sustainable Resources Development Plan.

- 32. The Actions are to:
  - Promote energy efficiency in the domestic and business sector, especially among the most intensive users.
  - Encourage the development and deployment of renewable energy technology.
- 33. Chorley Borough's In developing own Community Strategy<sup>3</sup> there was close working during the initial preparation of the Local Development Framework. Planning Officers attended the meetings that took place with the public during consultation on the early stages of the Community Strategy. This joint working prepared the ground for the Issues and Options Paper of the Local Development Framework published in the autumn of 2004. This, in turn, directly influenced the two policies SR1: Incorporating Sustainable Resources into New Development and SR2: Renewable Energy. Appendix 4 sets out the relevant extracts form Chorley's Community Strategy.
- 34. One of the related actions of the Chorley Community Strategy is to develop a sustainable energy strategy for the Borough by 2008. This falls within Goal 1 of the Community Strategy to, "Improve our urban and rural surrounds and enhance the wildlife of the borough to provide an attractive environment for residents, visitors, and
- 3 Chorley Borough's Community Strategy 2005-2025 was published in October 2005.

### 4. Strategic Context

investors." The Sustainable Resources Development Plan Document and the additional information that is contained within the Supplementary Planning Document will be complementary to this.

The Chorley Community Strategy also refers 35. to waste minimisation, increased recycling and improvements in the energy efficiency of private sector housing. Reducing waste, ensuring that recycling facilities are designed into all developments at the planning application stage and that developments are designed to be energy efficient are all considerations that are directly addressed in the policies in this Development Plan Document. Appendix 4 illustrates the large number of partners that are working together with the Council on these shared priorities. Partners include the Chorley and South Ribble Home Improvement Agency, energy suppliers, Lancashire County Council, Chorley Civic Society, the North West Development Agency, the Chamber of Commerce, local businesses, Sustainability Northwest, the Environment Agency, local and Lancashire Community businesses Development Limited (LCDL). Both Ambition

Lancashire and Chorley's Community Strategy are currently being reconsidered. Early indications are that climate change is increasingly moving up the local agenda and will feature more prominently in revised versions of these Community Strategies.

### **Other Relevant Strategies/Regulations**

Chorley Borough Local Development

Framework

36. Normally, built developments require at least two types of approval - planning permission and Building Regulations consent. The latter is more concerned with ensuring that buildings are well built in terms of meeting construction standards and are safe to use. However, the scope of Building Regulations is expanding. Part L came into force in April This considerably increases 2006. the requirement for energy efficiency albeit not necessarily requiring the integration of renewable energy capture. This Development Plan Document is primarily concerned with planning requirements but while some of these will be backed up through the implementation of the Building Regulations developers will be encouraged to exceed these minimum standards.

### 5. Issues and Evidence Specific to Chorley Borough

- 37. There is national and international consensus that global warming is a fact and that one way to prevent the negative impacts of global warming is to reduce carbon emissions.
- 38. To do this and for Chorley to play its part in tackling climate change it is important to minimise resource demand, cut unnecessary use, increase efficiency and generate renewable energy. This includes the sustainable sourcing and reuse of construction materials and the recycling of

waste. Chorley Borough has the one of the highest rates of domestic waste recycling (including composting) in the country (over 40% of all such waste in 2007). The space demands on households to sort, and temporarily store, waste for recycling are large and the design of new housing should take account of this to ensure the high rates improve further. Other forms of development require to be designed to facilitate the principles of reduce, reuse and recycle.

### 5. Issues and Evidence Specific to Chorley Borough

- 39. Initiatives such as energy reduction, water management and energy efficiency are important. These can be achieved effectively by planning policy implementation. It is unlikely that there will be any obvious negative impact on Chorley's environment from implementing these initiatives.
- 40. However, the generation of power from renewable sources is dependent on the physical environment. This is self-evidently specific to Chorley Borough. The environment of Chorley, including its climate and topography provides both opportunities and restrictions. The following describes the physical characteristics of the Borough.
- 41. In the east of the Borough are sparsely populated upland areas forming part of the West Pennine Moors. On the lower slopes are stone built villages. The central part of the Borough, between the M6 and M61 motorways, is more built up, with the principal market and former mill town of Chorley and to the south Adlington, which is an important engineering centre, and the former mining/ textiles township of Coppull. To the north of Chorley town are the settlements of Claytonle-Woods, Euxton and Whittle-le-Woods, which have expanded considerably through suburban developments since the 1960s. The west of the Borough is typically lowland countryside which becomes flatter further to the west as it becomes part of the Lancashire Plain. Here. red brick villages are characteristic, the largest being Eccleston and Croston, which experienced some suburban growth in the second half of the 20th century.
- 42. Around 70% of the Chorley Borough is within the Green Belt. There are no Areas of Outstanding Natural Beauty but there are 9

designated Conservation Areas, 422 Listed Buildings (of architectural or historic interest), and 2 nature conservation Sites of Special Scientific Interest.

- 43. Chorley is a generally affluent Borough but there are pockets of deprivation with households living in fuel poverty. The local Home Improvement Agency is working with Chorley and South Ribble Councils to remove fuel poverty. The Borough also has a higher than average level of residents who describe their health as 'not good' and who are therefore more likely to have higher energy requirements.
- 44. In 2005 the Council published a report on 'Opportunities for Renewable Energy in Chorley'. This concluded work done by a working party made up of representatives from Renewables Northwest, Sustainability Northwest (sponsored by the GONW), the Council, the public and other stakeholders. This report is a significant part of the evidence base on which this Sustainable Resources Development Plan Document is based.
- 45. The Report referred to the following energy sources:
  - Wind
  - Hydro
  - Landfill gas
  - Biomass
  - Solar
  - Anaerobic digestion
  - Ground source heat
- 46. The separate draft Sustainable Resources Supplementary Planning Document, includes maps that were taken from this Report. The maps were presented at the second of two workshops attended by the public, interested

### 5. Issues and Evidence Specific to Chorley Borough

amenity groups and developers. These maps show the various opportunities for capturing renewable energy within Chorley Borough. They do not define areas where there will be a presumption in favour of developing a particular form of energy capture nor do they preclude such installations being developed outside of these areas. In line with national advice it is considered more appropriate that maps be contained within these а Supplementary Planning Document but they will inform consideration of any planning applications for stand-alone renewable energy generation schemes.

- 47. This research work has been complemented by a study undertaken by the Lovejoy Consultancy in a report that sets out landscape sensitivity to wind turbine development in Lancashire. Excerpts from this will be included in the adopted version of the Supplementary Planning Guidance. However the report shows there are extensive areas of the Borough with a low landscape sensitivity to wind development.
- 48. In addition, it is important to note that the average rainfall at the nearest weather station to Chorley Borough is 871 mm per year, compared to the national average of 838 mm<sup>4</sup>. Therefore, this is significant in that there is the opportunity to utilise this on site in buildings and so save money and resources through not treating water. However high rainfall is also a threat in that surface water run-off needs to be managed effectively to reduce the risk of localised flooding.
- 49. The conclusions of the 'Opportunities for Renewable Energy in Chorley' report were
- 4 www.metoffice/gov.uk/climate/uk/averages/19712000 sites

that given the specific natural resources of the Borough, in particular wind, there are many opportunities for renewable energy generation to be integrated into proposed and existing developments (microgeneration) and for viable stand-alone renewable energy schemes.

Chorley Borough Local Development

Framework

50. These locally distinctive characteristics of Chorley Borough, backed by the research evidence demonstrates the ample opportunities to utilise these natural resources and leads to the following spatial vision.

Chorley Borough Local Development Framework

11

### 6. Spatial Vision for Chorley for the use of Sustainable Resources

The following is a positive spatial vision for Chorley:

"That by 2016, the principles of sustainable development and, in particular, a positive attitude to reducing carbon emissions, will run through all development activity, with Chorley Borough Council acknowledged as a leading authority enabling residents and businesses to reap economic, social and environmental benefits."

- 51. The following objectives are derived from this vision:
  - Promote the reduction of energy requirements in new developments.
  - Minimise waste production and encourage the recycling of waste products in new developments.
  - Require the use of construction materials which have been re-used or come from sustainable sources.
  - Manage water in a sustainable manner, reducing consumption and making greater use of recycled water in new developments.
  - Impose clearly signalled year on year targets for the energy requirements of buildings to be met on site by renewable energy capture.
  - Increase year on year installed renewable energy capacity in the Borough.

4 www.metoffice/gov.uk/climate/uk/averages/19712000 sites

Chorley Borough Local Development Framework

12

### 7. The Development Plan Policies

### **Policy SR1: Incorporating Sustainable Resources into New Development**

Subject to other planning policies, planning permission for development will only be granted on proposals of 5 or more dwellings or non-residential units of 500 sq metres or more floor space where all of the following criteria are satisfied;

- (a) Evidence is set out to demonstrate that the design and layout of the building minimises energy use, maximises energy efficiency and is flexible enough to withstand climate change and;
- (b) At least 20% of the building materials to be used will come from recycled sources which minimise the energy costs of production, with all other materials to be sustainably sourced and;
- (c) Appropriate renewable energy power generation equipment is to be installed and implemented to reduce the carbon emissions of predicted energy use by at least 10%. (This minimum figure is to increase to 15% for any applications received from 2010 and to 20% by 2015 onwards) and;
- (d) The use of non-grey water is to be minimised and the quality, quantity and amenity of surface water is to be managed through the implementation of sustainable urban drainage systems where appropriate and;
- (e) Appropriate storage space is to be provided for recyclable waste materials and composting and;
- (f) If the proposed development lies within a nationally designated area, such as a Conservation Area or affects a Listed Building, it will still be expected to satisfy the criteria above through the sensitive integration of energy efficiency measures and micro-generation techniques such that there are no adverse impacts on the character of designated features of the historic and natural environment or their wider settings.

This will be formalised by dwellings being required to meet Level 3 of the Code for Sustainable Homes by 2010, Level 4 by 2013 and Level 6 by 2016. All other buildings should be rated "very good" under the BREEAM standards from 2010.

The Council will encourage other developments to integrate such principles into any building works that they may undertake.

### 7. The Development Plan Policies

### **Reasoned Justification**

- 52. Chorley is well placed to provide new development that can be designed in a sustainable way. It also currently produces relatively high levels of carbon emissions. The Borough is very rich in natural renewable resources and the way its towns and villages have developed mean that the problems experienced in heavily built up urban areas, such as issues of wind turbulence, and over-shadowing are for the most part avoided. Ground conditions are such that it is generally suitable for ground source heat. This allows the straight-forward integration of micro-generation technologies into building design. There is no shortage of land for development and the Council has made no secret of its proposed challenging requirements for new developments to be built sustainably. The requirements of this policy have been clearly sign-posted over a time period and would not impact on the economics of bringing forward sites for development. Consequently, the policy should be applicable throughout the Borough.
- 53. The requirement to design a building to be as carbon efficient as possible and to include renewable energy capture facilities should be integrated into the design process from the outset. This will result in financial savings to the developer compared to a situation where such technologies are only considered late on in the process of designing a building.
- 54. On the whole, areas of visual or historic sensitivity within Chorley Borough will be able to integrate appropriate renewable energy features to satisfy this policy. If it were considered that the special circumstances of the statutory protection

would compromised by be the implementation of this policy then this requirement would not be insisted upon. However, the Council would need to be persuaded that a serious attempt had been made to integrate energy efficiency measures and renewable energy capacity in the building design. The fact that a building is Listed for its historic or architectural importance would not in itself be a reason not to implement the policy. The National Trust has been able to integrate such requirements in some of its properties without harm. Further advice is found on the website www.helm.org.uk.

- 55. advice useful Detailed and links to organisations is set out in the Sustainable Supplementary Planning Resources Document. It covers topics such as energy use, waste recycling, materials, water, and renewable energy capture. This useful document is applicable to all developments irrespective of whether planning permission is required.
- 56. The sustainable management of construction waste is included within this policy to ensure developers that are aware of their responsibility set out in the Lancashire Minerals Waste Local Plan and Joint Lancashire Structure Plan and the existing and emerging Regional Spatial Strategies to minimise waste. It also has a significant impact on the carbon used in developments. A Supplementary Planning Document on Waste Minimisation has been produced by the Joint Lancashire Planning Authorities that gives greater guidance on this subject. This includes what information should be included in the Design and Access Statement (required to accompany any planning application) in relation to waste minimisation and the recycling of

### 7. The Development Plan Policies

construction materials. The figure of 20% of materials from renewable sources is considered reasonable and has not been objected to during any of the earlier preparatory work on this document.

- 57. The integration of renewable energy capture into developments is increasingly becoming the As technologies norm. improve, made amendments are to permitted development rights and the comparative costs of micro-generation technologies come down it will be less onerous for a fixed proportion of a development's energy requirements to be generated on site. Therefore to ensure that challenging targets set are met, the amount of carbon emissions to be saved through energy generated by developments, will be increased over time depending on when planning permission is granted. A result of this will be that fuel costs are less of a liability for businesses and residents alike. This is evidently important for the elderly and other vulnerable people.
- 58. Applicants are required to demonstrate in their Design and Access Statement (submitted to accompany a planning application) how the integration of renewable energy capture will be able to reduce carbon emissions. Details of how the developer is to submit information on carbon reduction will be integrated in to proposals will be included in the Sustainable Resources Supplementary Planning Document.
- 59. However, developers will be required to set out the overall energy consumption of the development expressed in kilowatt hours broken down into power source, ie gas and electricity. Then this will then be converted into carbon emissions. The developer would then have to reduce the applicable % carbon emissions by integrating renewable energy

capture on site. Evidently a reduction in the energy required to support a development will result in a smaller amount of energy being required to be generated through the integration of renewable energy generation. If a developer does consider that they do not have access to a reasonable approximation of the future energy requirements of the property they will be able to use an accepted industry standard. However, if they have designed the building to be energy efficient in line with the policy the standard figures are likely to be higher than the actual energy requirement. This would result in the generation of more renewable energy than required by the standards and potentially more costs. Therefore it is in the applicant's interest to provide accurate information.

- 60. The introduction of a Local Area Network (a decentralised energy supply) would be encouraged on larger developments. This has the advantage of being efficient as the energy does not have far to travel from source to use and therefore less is lost in transit. It also has the advantage of not requiring separate renewable energy installations in individual buildings.
- 61. The responsible use of water resources such as low volume taps in toilets and bathrooms and water efficient appliances paired with simple methods such as including water butts in gardens can help save water. Developments should be designed to cope with extremes of weather, including flash flooding, through the avoidance of large areas of hard standing.
- 62. The integration of appropriate Sustainable Urban Drainage Systems (SUDS) is an important way to deal with these challenges. However, in the past there have been issues regarding who is responsible for the

### 7. The Development Plan Policies

maintenance of such systems. Therefore, when a SUDS is integrated into a development, planning permission will not be granted until a realistic management scheme has been negotiated. An interim Code of Practice for SUDS has been developed by the National SUDS Working Group and can be accessed at www.ciria.org/suds/icop.htm

- 63. It is important that developments whether they are for residential or commercial use provide adequate space for refuse waste to be collected and stored otherwise it may be difficult to increase recycling rates in line with the targets set.
- 64. Conditions will be imposed on planning permissions to ensure that the reduction in carbon emissions is retained over the life of the development. All the above principles of good design and sustainable development should be considered even where planning permission is not required for a development or other works.
- 65. A good example of where planning permission may not be required but the policy has an influence is the improvement of energy efficiency of vulnerable people's homes. This has a direct impact on the reduction of fuel poverty. Chorley is working in partnership with South Ribble Borough Council and the local Home Improvement Agency to reduce fuel poverty.
- 66. The following indicators, targets and milestones will be monitored through the Local Development Framework Annual Monitoring Report. Higher targets will be pursued if monitoring shows the minimum provisions are being frequently exceeded.
- 67. Not all the measurements are restricted to

development that can be controlled through planning permissions. This reflects the spatial planning and corporate activity of the Council and its partners and interested stakeholders.

- 68. Some of these targets may be shared.
- 69. Policy SR1 relates to the following spatial objectives:
  - Promote the reduction of energy requirements in new developments.
  - Minimise waste production and encourage the recycling of waste products in new developments.
  - Require the use of construction materials that have been re-used or come from sustainable sources.
  - Manage water in a sustainable manner, reducing consumption and making greater use of recycled water in new developments.
  - Impose clearly signalled year on year targets for the energy requirements of buildings to be met on site by renewable energy capture.

### 7. The Development Plan Policies

### 70. These can be monitored in the following way:

Performance Indicator	Baseline	Interim Milestone	Target	How Collected
SAP (The Government's Standard Assessment Procedure for Energy Rating of a dwelling) for housing in the public sector.	2004/05 69	2009/10 74	2014/15 80	Already collected as Best Value Performance Indicator – detailed information re housing ie construction and insulation etc analysed using standard software.
SAP ratings for housing in the private sector.	2004/05 49	2009/10 55	2014/15 67	Already collected as Best Value Performance Indicator – detailed information re housing ie construction and insulation analysed using standard software.
Number of vulnerable households living in fuel poverty.	2004 7.2%	-	2010 Zero	To be measured using a calculation of household expenses, wages and fuel cost.
Number of existing properties installing cavity wall insulation.	2005/06 524	2009/10 Increase by 15% above baseline	2014/15 Increase by 30%	To be measured through Building Regulation notifications.
Tonnes of CO <sub>2</sub> per capita for domestic emissions.	2004 2.9 tonnes	-	2020 To be in top three performers in Lancashire	To be measured through Government data <sup>5</sup> .
Tonnes of CO₂ per capita.	2004 10.24 MW (Current North West average per capita 9.04 MW)	-	2015 To be at or below North West Average	To be measured through Government data <sup>6</sup> .

- 5 www.defra.gov.uk/environment/statistics/globatmos/download/regionalrpt
- 6 ibid

### 7. The Development Plan Policies

Performance Indicator	Baseline	Interim Milestone	Target	How Collected
Percentage of household waste recycled.	2006/07 23.6%	2009/10 To be at least 25.5%	2015 Long term target for household	Detailed information re recycling and composting already collected as Best Value.
Percentage of household waste composted.	2006/07 20%	2009/10 To be at least 24.5%	waste to be recycled and composted	
Percentage of households served by kerbside collection for recyclables.	2006/07 98%	-	2010 100%	Detailed information already collected as Best Value Performance Indicator.
Percentage of developments over threshold reducing carbon emissions at requisite level.	None	2009/10 To be 90% of approvals	2015/16 100%	To be measured through monitoring of planning applications and Building Regulations data.
Percentage of all developments over threshold hitting Code for Sustainable Homes and BREEAM standards.	None	2009/10 To be 90% of approvals	2015/16 100%	To be measured through monitoring of planning applications and Building Regulations data.

- 71 To date it is difficult to measure the use of construction materials on site and the use of water. However, as soon as an easily verified method of monitoring is found this will be included within the Local Development Framework Annual Monitoring Report.
- 72. The policy will be implemented on the whole through the development control (planning application) function of the Council. Other Council departments are working together towards meeting these targets in concert with the Chorley Partnership (the Local Strategic Partnership). However the policy, together with the draft Supplementary Planning Document, should provide guidance for those who do not necessarily require planning permission for what they are proposing to do

but wish to undertake high quality development. An example of which, would be the refurbishment of existing properties.

### 7. The Development Plan Policies

### **SR2: Renewable Energy Schemes**

Proposals for renewable energy schemes will be supported and planning permission granted where the following criteria are met:

- (a) The proposal would not have an unacceptable impact on the landscape character and visual appearance of the local area, including the urban environment.
- (b) The reason for the designation of a site with statutory protection would not be compromised by the development.
- (c) Any noise, odour, traffic or other impact of development is mitigated so as not to cause unacceptable detriment to local amenity.
- (d) No significant harm will be caused to local nature, ecology and biodiversity and any adverse impact will be appropriately mitigated and/or compensatory provisions are made.
- (e) Any significant adverse local affects of the proposal are outweighed by wider environmental, social and economic benefits.
- 73. Planning Policy Statement 22 - 'Renewable Energy' and the Government's commitment to increasing the amount of energy derived from renewable sources means that applications for stand-alone schemes are required to be considered positively. If in the future Chorley had already met its proportion for the targets for renewable energy generation set out in the Regional Spatial Strategy this would not have any influence in determining any application.
- 74. The joint study undertaken by Renewables North West and Sustainability Northwest, 'Opportunities for Renewable Energy in Chorley', makes clear that Chorley is well placed to contribute to regional and national targets for energy from renewable sources.
- 75. These areas of opportunity include urban industrial and employment sites, as well as the rural areas. Chorley is well placed to utilise the high winds from the south west. Much of the Borough is open and exposed to

these prevailing winds with the West Pennine Moors rising to the east. However, actual windspeeds or the commercial viability of developments cannot be taken into account when considering applications.

Chorley Borough Local Development

Framework

- 76. Other technologies such as anaerobic digestion, hydro-power and landfill gas could all be exploited within the Borough. Chorley has a large number of dairy farms as well a number of old water courses that could be possibly harnessed. It also includes a number of land fill tips. No technology should be discounted.
- 77. Any application for renewable energy generation will be required to be sensitively located and designed. Given the fast evolving nature of this relatively new sector it would be inappropriate to put much detail in the Development Plan Document but to set out broad tests of impact by which all technologies would be judged.

### 7. The Development Plan Policies

- 78. The (draft) Supplementary Planning Document that accompanies this Development Plan Document gives detailed advice how differing technologies can be utilised and sets out in detail the impacts of the various technologies and means to mitigate any adverse effects. Additional information including links to a number of web sites such as www.helm.org.uk which provides advice relating to wind energy, climate change and historic buildings, is contained in the Supplementary Planning Document. This information will be updated quickly and regularly through the frequent review of the Supplementary Planning Document.
- 79. When considering development within a protected area that has a national or local designation it is important to understand what makes the area special, and in particular what impact any development would have on these characteristics whether they be visual, historic, or natural or ecological. Any development will be expected to minimise any impact, and compensatory or mitigation measures will be required. If the impact is unacceptable in relation to the objectives of the specific designation such as the setting of a Listed Building it will be refused. Developers will be expected to liaise with the relevant statutory amenity and bodies groups and organisations to ensure that ecological or other negative impacts are either avoided or measures mitigation are included. Environmental Impact Assessments may be required.
- 80. The Joint Lancashire Structure Plan authorities undertook research (the Lovejoy Study) on landscape sensitivity to wind development. An excerpt of the map setting out the sensitivity of the landscape to wind

development is to be contained in the Supplementary Planning Document. This demonstrates a number of areas within Chorley in which there are perceived to be few visual constraints to wind development.

- 8.1 These levels of sensitivity will not be used to determine applications for wind turbines but can be used as a tool as to what types of development are likely to be appropriate in different areas of the Borough.
- 82. Developments incidental to energy generation will need to be sensitively implemented. For example, new means of vehicular access or connections to the national grid will be required to be well designed, and any impacts mitigated. Where appropriate the Council will ensure that obligations (legal agreements planning related to planning permissions) are used to ensure that once the development or infrastructure is no longer required it is removed and the site restored. Planning obligations will also be used for any other reason to ensure the development is acceptable.
- 83. Where appropriate noise impact assessments may be required as conditions to any planning permissions.
- 84. In line with the Council's Statement of Community Involvement, adopted in July 2006, developers are encouraged to consult with the local community prior to submitting any planning application that may prove controversial as well as major infrastructure proposals. Applicants should then provide the planning authority with a Record of Community Involvement setting out how any engagement took place, what came from it this affected the how submitted and application.

### 7. The Development Plan Policies

- 85. The following indicators, targets and Local Development Framework milestones will be monitored through the Annual Monitoring Report. Higher targets will be pursued if monitoring shows that those set are being frequently exceeded.
- 86. Not all the measurements are restricted to development that can be controlled through planning permissions. This reflects the spatial planning and corporate activity of the

Council and its partners and interested stakeholders.

- 87. Policy SR2 relates to the following spatial objective:
  - Increase year on year installed renewable energy capacity in the Borough.
- 88. This can be monitored in the following way:

Performance Indicator	Baseline	Interim Milestone	Target	How Collected
Tonnes of CO <sub>2</sub> per capita (all emission sources)	2004 10.24 MW Current NW average per capita 9.04 MW	-	2014/15 To be at or below North West England's average	To be monitored through Government data <sup>7</sup> .
Mega watt of energy from renewable sources (excluding micro generation but includes energy from landfill)	As at 2005 4.3 MW	2009/10 13.2 MW	2014/15 Greater than 16.9 MW to exceed pro rata by land mass Chorley's contribution to Lancashire's sub regional targets set by the RSS.	To be measured through planning permissions.

89. This policy will be implemented through the development control function of the Council.

### Existing Policies within the Adopted Chorley Borough Local Plan Review 2003

90. The two policies replace policies EP18-Surface Water Run Off; EP22-Energy Conservation; EP23-Energy from Renewables; EP24-Wind Farms. Chorley Borough Local Development Framework

21

### Sustainability Appraisal Testing of the Development Plan Policies

Sustainability Appraisal helps to promote sustainable development through the consideration of likely social environmental and economic effects of plan options, policies and proposals. The following tables outline the likely effects of implementing the policies in the Sustainable Resources Development Plan Document in relation to social, environmental and economic objectives.

### Policy SR1: Incorporating Sustainable Resources into New Development

Key to Sustainability Appraisal Effects						
/ No link	0 Neutral					
+ Minor Positive	- Minor Negative					
++ Major Positive	Major Negative					

	Predict	ed Effects			Justification for assessment noting: • Likelihood/certainty of effect occurring (high/
		Ass	essment of	Effect	med/low)
	Nature of Effect on Baseline/Indicators	Short term	Medium term	Long term	<ul> <li>Geographical scale of effect</li> <li>Temporary or permanent effect</li> <li>Assumptions made</li> <li>Recommendations for mitigation/improvement</li> </ul>
Social Objectives		•	•		
1. To reduce social exclusion	No link.	/	/	/	There is no link between this policy and reducing social exclusion.
2. To reduce the need to travel, improve choice and use of sustainable transport modes	No link.	/	/	/	There is no link between this policy and reducing the need to travel, improving choice and the use of sustainable transport modes.
3. To improve physical health and mental health and reduce health inequalities	Minor positive effect. Should have some positive health benefits in the long term in terms of increasing life expectancy and decreasing the number of residents describing their health as not good.	0	0	+	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to a reduction in demand for energy, greater levels of renewable energy production and a reduction in energy production from fossil fuels that cause pollution.</li> <li>Mitigation/improvement: None</li> </ul>
4. To improve access to good quality affordable and resource efficient housing	Major positive effect. Will significantly increase the SAP energy ratings of homes.	0	0	++	<ul> <li>Likelihood/certainty: High</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: None</li> <li>Mitigation/improvement: None</li> </ul>
5. To reduce crime, disorder and the fear of crime	No link.		1	Loca	There is no link between this policy and reducing crime, disorder and the fear of crime.

	Predict	ed Effects			Justification for assessment noting:
		Ass	essment of	Effect	<ul> <li>Likelihood/certainty of effect occurring (high/ med/low)</li> </ul>
Sustainability Objective	Nature of Effect on Baseline/Indicators	Short term	Medium term	Long term	<ul> <li>Geographical scale of effect</li> <li>Temporary or permanent effect</li> <li>Assumptions made</li> <li>Recommendations for mitigation/improvement</li> </ul>
6. To enable groups and communities to contribute to decision making.	No link.	/	/	/	There is no link between this policy and enabling groups and communities to contribute to decision making.
7. To develop strong and positive relationships between people from different backgrounds and communities.	No link.	/	/	/	There is no link between this policy and developing strong and positive relationships between people from different backgrounds.
8. To improve access to an use of basic goods, services and amenities for all groups.	No link.	/	/	/	There is no link between this policy and improving access to and the use of basic goods, services and amenities for all groups.
Summary of appraisal ag	jainst social objectives:	0	0	+	This policy should help to improve health in the long-term and have a significant positive impact in terms of the provision of resource efficient housing, but will have a minimal impact on the other social objectives.
Environmental Objective	s			<u> </u>	
9. To protect, enhance and manage the diversity of cultural and built environment and archaeological assets.	Neutral. The policy recognises that energy efficiency measures and micro generation equipment could potentially impact negatively on the appearance of designated areas or Listed Buildings. To prevent this occurring the policy requires that proposals have no adverse impact on the character of designated features of the historic environment or their wider settings. Will not affect the indicators.	0	0	0	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That the policy will prevent adverse impacts on designated areas and Listed Buildings.</li> <li>Mitigation/improvement: None. The policy provides greater protection for nationally designated areas and Listed Buildings than the options set out in the March 2007 Sustainable Resources Preferred Options document.</li> </ul>
10. To protect and enhance environmental quality, local character and accessibility of the landscape across the Borough.	Neutral. The policy recognises that energy efficiency measures and micro generation equipment could potentially impact negatively on the appearance of nationally designated areas or Listed Buildings. To prevent this occurring the policy requires that proposals have no adverse impact on the character of designated features of the historic and natural environment or their wider settings. Will not affect the indicators.	0	0	ioho Local F	<ul> <li>Likelihood/certainty: Uncertain as less development takes place in the countryside</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That the policy will prevent adverse impacts on designated areas and Listed Buildings.</li> <li>Mitigation/improvement: None. The policy provides greater protection for nationally designated areas and Listed Buildings than the options set out in the March 2007 Sustainable Resources Preferred Options document.</li> </ul>

	Predict	ed Effects			Justification for assessment noting:
	Assessment of I		Effect	<ul> <li>Likelihood/certainty of effect occurring (high/ med/low)</li> </ul>	
Sustainability Objective	Nature of Effect on Baseline/Indicators	Short term	Medium term	Long term	<ul> <li>Geographical scale of effect</li> <li>Temporary or permanent effect</li> <li>Assumptions made</li> <li>Recommendations for mitigation/improvement</li> </ul>
17. To minimise the requirement for energy use, promote efficient use and increase the use of energy from renewable resources.	Major positive effect. Should lead to an increase in the number of planning applications that include capacity for energy production from renewable sources, improve the SAP energy ratings of homes and increase the Borough's installed capacity for energy production from renewable sources.	0	+	++	<ul> <li>Likelihood/certainty: High</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to a reduction in demand for energy, greater levels of renewable energy production and a reduction in energy production from fossil fuels that cause pollution.</li> <li>Mitigation/improvement: None</li> </ul>
18. To minimise waste and increase re-use, recycling and recovery rates.	Major positive effect. The policy should encourage more sustainable use of building materials and better waste management, impacting positively upon recycling rates and household waste levels.	0	+	++	<ul> <li>Likelihood/certainty: High</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will encourage more efficient use and re-use of building materials and encourage more sustainable waste management.</li> <li>Mitigation/improvement: None</li> <li>This policy should have many significant long-</li> </ul>
objectives:		0	+	++	term positive impacts on the environment.
Economic Objectives					
19. To reduce disparities of the Borough's economic performance.	No link.	/	/	/	There is no link between this policy and reducing disparities of the Borough's economic performance.
20. To exploit the growth potential of business sectors.	Minor positive effect. Over time this policy could lead to growth in the renewables, energy efficiency & sustainable waste management business sectors.	0	+	+	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will help to provide greater business opportunities in the renewables, energy efficiency and waste management sectors.</li> <li>Mitigation/improvement: None</li> </ul>
21. To develop and market the Borough's image.	Minor positive effect. May increase the % of people satisfied with the Borough as place to live and help to improve the Borough's image.	0	+	+	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That incorporating sustainable resources in new developments will be viewed positively by people.</li> <li>Mitigation/improvement: None</li> </ul>
22. To deliver urban renaissance.	Minor positive effect. Will not affect the indicators, but may help to improve environmental conditions in urban areas and boost the image of the Borough's settlements.	0	+	Loca	<ul> <li>Likelihood/certainty: Uncertain</li> <li>Scale: Borough-wide, in urban areas</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That incorporating sustainable resources in new developments in urban areas will be viewed positively by people.</li> <li>Mitigation/improvement: None</li> </ul>

	Predict	ed Effects			Justification for assessment noting: • Likelihood/certainty of effect occurring (high/

Sustainability Objective	Nature of Effect on Baseline/Indicators	Short term	Medium term	Long term	<ul> <li>Geographical scale of effect</li> <li>Temporary or permanent effect</li> <li>Assumptions made</li> <li>Recommendations for mitigation/improvement</li> </ul>		
11. To protect and enhance biodiversity and the viability of endangered species, habitats and sites of geological importance.	Major positive effect. Will not affect the indicators, but should help to improve biodiversity and habitats in the long term.	0	+	++	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to a reduction in demand for energy and a reduction in energy production from fossil fuels that cause pollution, which can negatively affect biodiversity and habitats.</li> <li>Mitigation/improvement: None</li> </ul>		
12. To protect and improve the quality of inland waters.	Major positive effect. Over time should lead to more inland waters complying with river water quality standards.	0	+	++	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to a reduction in demand for energy and a reduction in energy production from fossil fuels that cause pollution of inland waterways.</li> <li>Mitigation/improvement: None</li> </ul>		
13. To protect and improve air quality.	Major positive effect. Over time should help to lead to a reduction in sulphur dioxide levels.	0	+	++	<ul> <li>Likelihood/certainty: High</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to a reduction in demand for energy and a reduction in energy production from fossil fuels that cause air pollution.</li> <li>Mitigation/improvement: None</li> </ul>		
14. To restore and protect land and soil.	Neutral.	0	0	0	This policy is unlikely to have any effects on restoring and protecting land and soil.		
15. To mitigate and adapt to climate change.	Major positive effect. Over time this policy should help to reduce the emission of greenhouse gases, such as carbon dioxide.	0	+	++	<ul> <li>Likelihood/certainty: High</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to a reduction in demand for energy, greater levels of renewable energy production and a reduction in energy production from fossil fuels that cause pollution.</li> <li>Mitigation/improvement: None</li> </ul>		
16. To ensure the prudent use of natural resources and the sustainable management of existing resources.	Major positive effect. Will not affect the indicators but should lead to the more prudent use of natural resources over time.	0	+	eho Loca F	<ul> <li>Likelihood/certainty: High</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to a reduction in demand for energy and a reduction in demand for raw materials used in energy production and as building materials.</li> <li>Mitigation/improvement: None</li> </ul>		

### **Appendix 1**

	Predict	ed Effects			Justification for assessment noting: Likelihood/certainty of effect occurring (high/
Sustainability	stainability		essment of	Effect	med/low)
Sustainability Objective Nature of Effect on Baseline/Indicators	Short term	Medium term	Long term	<ul> <li>Geographical scale of effect</li> <li>Temporary or permanent effect</li> <li>Assumptions made</li> <li>Recommendations for mitigation/improvement</li> </ul>	
23. To deliver rural renaissance.	Neutral.	0	0	0	This policy is likely to have little effect on delivering a rural renaissance as relatively little development takes place in the rural areas, in comparison to the urban areas.
24. To secure economic inclusion.	Minor positive effect. May not necessarily impact upon the indicators, but may result in job creation in the renewables/waste management sectors.	0	+	+	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will help to provide greater business opportunities, which will result in job creation.</li> <li>Mitigation/improvement: None</li> </ul>
25. To develop and maintain a healthy labour market.	Minor positive effect. Will not affect the indicators, but may provide job opportunities in the renewables/waste management sectors.	0	+	÷	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will help to provide greater business opportunities, which will result in job creation.</li> <li>Mitigation/improvement: None</li> </ul>
Summary appraisal aga	ainst economic objectives:	0	+	÷	This policy should have a minor positive impact in the long-term in terms of most of the economic objectives. However, it is likely to have little impact in terms of reducing disparities of the Borough's economic performance or in delivering a rural renaissance.

Chorley Borough Local Development Framework

	Predicted Effects				Justification for assessment noting:	
		Assessment of Effect			<ul> <li>Likelihood/certainty of effect occurring (high/ med/low)</li> </ul>	
Sustainability Objective	Nature of Effect on Baseline/Indicators	Short term	Medium term	Long term	<ul> <li>Geographical scale of effect</li> <li>Temporary or permanent effect</li> <li>Assumptions made</li> <li>Recommendations for mitigation/improvement</li> </ul>	
13. To protect and improve air quality.	Major positive effect. Over time should help to lead to a reduction in sulphur dioxide levels.	0	+	++	<ul> <li>Likelihood/certainty: High</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to greater levels of renewable energy production and a reduction in energy production from fossil fuels that cause air pollution.</li> <li>Mitigation/improvement: None.</li> </ul>	
14. To restore and protect land and soil.	Neutral.	0	0	0	This policy is unlikely to have any effects on restoring and protecting land and soil.	
15. To mitigate and adapt to climate change.	Major positive effect. Over time this policy should help to reduce greenhouse gas emissions.	0	+	++	<ul> <li>Likelihood/certainty: High</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to greater levels of renewable energy production and a reduction in energy production from fossil fuels that cause pollution.</li> <li>Mitigation/improvement: None</li> </ul>	
16. To ensure the prudent use of natural resources and the sustainable management of existing resources.	Major positive effect. Will not affect the indicators but should lead to the more prudent use of natural resources over time.	0	+	++	<ul> <li>Likelihood/certainty: High</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to greater levels of renewable energy production and a reduction in demand for raw materials used in energy generation from non-renewable sources.</li> <li>Mitigation/improvement: None</li> </ul>	
17. To minimise the requirement for energy use, promote efficient use and increase the use of energy from renewable resources.	Major positive effect. Should lead to an increase in the number of planning applications that include capacity for energy production from renewable sources and increase the Borough's installed capacity for energy production from renewable sources.	0	+	++	<ul> <li>Likelihood/certainty: High</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to greater levels of renewable energy production and a reduction in energy production from non-renewable sources.</li> <li>Mitigation/improvement: None</li> </ul>	
18. To minimise waste and increase re-use, recycling and recovery rates.	Major positive effect. Will not affect the indicators but should lead to a reduction in waste by-products from non- renewable resources.	0	+	Ċho Loca	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to greater levels of renewable energy production and a reduction in waste by-products from energy generation from non renewable sources.</li> <li>Mitigation/improvement: None</li> </ul>	
Summary of appraisal ag objectives:	jainst environmental	0	+	++	This policy should have many significant long- term positive impacts on the environment, providing that it encourages greater levels of renewable energy production and a reduction in energy production from non-renewable sources.	

	Predicted Effects				Justification for assessment noting:	
		Assessment of Effect			<ul> <li>Likelihood/certainty of effect occurring (high/ med/low)</li> </ul>	
Sustainability Objective	Nature of Effect on Baseline/Indicators	Short term	Medium term	Long term	<ul> <li>Geographical scale of effect</li> <li>Temporary or permanent effect</li> <li>Assumptions made</li> <li>Recommendations for mitigation/improvement</li> </ul>	
Economic Objectives						
19. To reduce disparities of the Borough's economic performance.	No link.	1	1	/	There is no link between this policy and reducing disparities of the Borough's economic performance.	
20. To exploit the growth potential of business sectors.	Minor positive effect. Over time this policy could lead to business growth in the renewables sector.	0	+	+	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will help to provide greater business opportunities in the renewables sector.</li> <li>Mitigation/improvement: None</li> </ul>	
21. To develop and market the Borough's image.	Minor positive effect. May increase the % of people satisfied with the Borough as a place to live and help to improve the Borough's image.	0	+	+	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will lead to greater levels of renewable energy production and will be viewed positively by people.</li> <li>Mitigation/improvement: None</li> </ul>	
22. To deliver urban renaissance.	Minor positive effect. Will not affect the indicators, but may provide job opportunities and investment in urban areas.	0	+	+	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide, in urban areas</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That some renewable energy generation schemes will take place in urban areas.</li> <li>Mitigation/improvement: None</li> </ul>	
23. To deliver rural renaissance.	Minor positive effect. Will not affect the indicators but may provide job opportunities and investment in rural areas.	0	+	+	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide, in rural areas</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That some renewable energy generation schemes will take place in rural areas.</li> <li>Mitigation/improvement: None</li> </ul>	
24. To secure economic inclusion.	Minor positive effect. May not necessarily impact upon the indicators, but may result in job creation in the renewables sector.	0	+	+	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will help to provide greater business opportunities resulting in job creation.</li> <li>Mitigation/improvement: None</li> </ul>	
25. To develop and maintain a healthy labour market.	Minor positive effect. Will not affect the indicators, but may provide job opportunities in the renewables sector.	0	+	Cho Loca F	<ul> <li>Likelihood/certainty: Medium</li> <li>Scale: Borough-wide</li> <li>Temporary/permanent: Permanent</li> <li>Assumptions made: That this policy will help to provide greater business opportunities resulting in job creation.</li> <li>Mitigation/improvement: None</li> </ul>	
Summary appraisal agai	nst economic objectives:	0	+	+	This policy should have a minor positive impact in the long-term in terms of most of the economic objectives, but is likely to have little impact in terms of reducing disparities of the Borough's economic performance.	

### Tests of Soundness (of a Development Plan Document - 'the Plan')

### **Procedural:**

- 1. It has been prepared in accordance with the Local Development Scheme.
- 2. It has been prepared in compliance with the Statement of Community Involvement, or with the minimum requirements set out in the Regulations where no statement of community involvement exists.
- 3. The plan and its policies have been subjected to Sustainability Appraisal.

### **Conformity:**

- 4. It is a spatial plan which is consistent with national planning policy and in general conformity with the Regional Spatial Strategy for the region or, in London, the spatial development strategy and it has properly had regard to any other relevant plans, policies and strategies relating to the area or to adjoining areas.
- 5. It has had regard to the authority's Community Strategy.

### Coherence, consistency and effectiveness:

- 6. The strategies/policies/allocations in the plan are coherent and consistent within and between Development Plan Documents prepared by the authority and by neighbouring authorities, where cross boundary issues are relevant.
- 7. The strategies/policies/allocations represent the most appropriate in all the circumstances, having considered the relevant alternatives, and they are founded on a robust and credible evidence base.
- 8. There are clear mechanisms for implementation and monitoring.
- 9. The plan is reasonably flexible to enable it to deal with changing circumstances.

### **Relevant Strategic Policies**

### **Regional Planning Guidance adopted March 2003**

Relevant policies: DP1 - Economy in the use of Land and Buildings, DP3 - Quality in New Development, SD8 - Development in the Wider Countryside, EC5 - Regional Investment Sites; RU2 - Diversification of the Rural Economy; EQ5 - A Regional Approach to Waste Minimisation, ER1 - Management of the North West's Natural and Built and Historic Environment; ER2 - Landscape Character, ER5 - Biodiversity and Nature Conservation; ER7 - Water Resources; ER8 - Development and Flood Risk; ER11 - Secondary and Recycled Aggregates; ER13 - Renewable Energy and Energy Efficiency.

### **Regional Spatial Strategy submitted January 2006**

Policies that are relevant; DP1 - Core Development Principles;EM5 - Integrated Water Management; EM9 - Secondary and Recycled Aggregates; EM11 - Waste Management and New Development; EM16 - A Framework or Sustainable Energy in the NW; EM12 - Energy Conservation and Efficiency and Policy EM17: Renewable Energy. Including proposed amendments in Panel Report into Examination in Public.

### Joint Lancashire Structure Plan adopted March 2005

Policy 20; Lancashire's Landscapes; Policy 21 - Lancashire's Natural and Man-Made Heritage; Policy 24 - Flood Risk; Policy 25 - Renewable Energy; Policy 27 - Development and Waste Minimisation.

Appendix 4

# Chorley's Community Strategy 2005-2025 Action Plan Extracts

# Priority 2 - Reducing "Pockets of Inequality"

Goal 2 - To achieve a balanced housing market with good quality housing and more attractive neighbourhoods

Lead Partner Chorley Borough Council Other Partners Home Improvement Agency/energy suppliers
Chorley Borough Council General Fund, Supporting People Private Investment
2006
420 tonnes £28,000
Reductions in CO2 emissions and reductions in annual fuel costs
Improve energy efficiency in the private sector (SAP rating)

# Goal 1 - Improve our urban and rural surroundings and enhance the wildlife of the borough to provide an attractive Priority 5 - To develop the Character and Feel of Chorley as a Good Place to Live and Visit

environment for residents visitors and investors

# Appendix 5

### Glossary

AMR – Annual Monitoring Report (assesses the progress of the Local Development Scheme and the extent to which Local Development Plan policies area being implemented).

- BREEAM Building Research Establishment Environmental Assessment Method (*Industry standard used to measure sustainability of buildings*).
- CS Core Strategy (set out the long- term spatial vision for the local planning authority and spatial objectives and strategic policies to deliver that vision).GONW Government Office for the North West (local office of Central government in Manchester).
- DPD Development Plan Document (Spatial planning documents that are subject to independent examination, together with the Regional Spatial Strategy make up the Development Plan.)
- Issues and Options- (produced during the early production stage of the preparation of Development Plan documents and may be issued for consultation to meet the requirements of Regulation 25.)
- JLSP Joint Lancashire Structure Plan (development plan document that is part of the LDD Local Development Document (collective name for Development Plan Documents, Supplementary Planning Documents and Statement of Community Involvement)
- LDF Local Development Framework (portfolio of Local Development Documents. It includes Development Plan Documents, Supplementary Planning Documents, Statement of Community Involvement, the Local Development Scheme and Annual Monitoring Reports).
- LDS Local Development Scheme (sets out the programme for preparing Local Development Documents)
- PINS Planning Inspectorate (Independent Inspectorate appointed by the Secretary of State to judge on documents and representations made. Write reports on whether the proposed policies are acceptable following on from the Examination in Public, which the Local Authority must accept.))
- PPS Planning Policy Statement (Central Government planning policy document that is required to be followed when determining planning applications and producing policies).
- Preferred Options- (produced as part of the preparation of Development Plan Documents, and is issued for formal public consultation as required by Regulation 26.)
- Public Examination (hearing in which the development plan is tested for soundness. Non-adversarial way of testing soundness of plan. Led by Planning Inspector who will make report that the Council will have to accept).
- RSS- Regional Spatial Strategy (sets out the region's policies in relation to the development and use of land. Makes up part of the development plan).
- SA Sustainability Appraisal (required for all local development documents to ensure that their social, economic and environmental impacts are tested).
- SCI Statement of Community Involvement (sets out the standards which authorities will achieve when including communities in the preparation of local development documents and development control decisions).
- SEA Strategic Environmental Assessment (environmental assessment of plans, policies and programmes).
- Soundness (nine tests that a plan should satisfy it includes the following categories, "procedural", "conformity", "coherence, consistency and effectiveness")
- Submission Stage (Local Development Plan document which is submitted to the Secretary of state prior to the Examination, at the same time there will be public consultation for six weeks).
- SPD Supplementary Planning Document (Provides supplementary information in respect of policies in Development Plan Documents.)
